

My husband is an over the road truck driver that uses the weather and traffic stations on the XM radio to help him put his hours of service on the road to good and sensible use. The government is already making it difficult for him to do his job and spend quality time with his family. The last thing he and other drivers need, is to have XM weather and traffic taken away so that they won't be able to steer clear of these hazards that would take even more time out of their hours of service. Do you want a truck driver running short on hours of service watching the TV while they are driving down the road in a traffic jam? Regular radio stations goof off more than they give the needed facts. Sometimes roads have been backed up and or closed for days due to construction and it is nice for the truckers to know ahead of time the road conditions so they can plan before they get stuck in traffic. I am urging you to reject NAB's petition 04-160. The men and women who move the USA need and pay for the XM service to assist them with their jobs.
